Performance to 31 August 2026 in GBP, total return, source: Saltus + Ani.

*Measured over 5 years (monthly). **Measured monthly. ***Underlying Fund Charges. **Short term ARC data are estimates and are likely to be revised.**

Saltus in-house funds pay quarterly distributions. Ex dividend dates: 28/02, 31/05, 31/08, 30/11. Dividend payment dates: 01/04, 01/07, 01/10, 01/01.

Past performance cannot be reliably used to predict future returns. Investments do not guarantee a return, the value and the income from them can fall as well as rise. You may not get back the amount originally invested.

Performance shown is of the Saltus model portfolios. Actual client performance may differ. Performance is shown net of an assumed 0.25% investment management fee and all third-party fund charges. Other charges may apply depending on the assets under management and agreed service level which may reduce the figures quoted

Multi Asset Class with Private Assets

What happened last month?

- Global equities rose 2.1% in August on resilient economic data and a strong second-quarter earnings season. Software led an IT sector rebound from July's sell-off, while Japan was the month's standout market, gaining close to 4% in local currency terms.
- Global bonds finished broadly unchanged (+0.1%), but that masked a volatile month for government bond yields (yields move inversely to prices). Rising energy prices remained a concern, the US Treasury announced larger buybacks of longer-dated bonds, and Fed Chair Kevin Warsh struck a hawkish tone at the Fed's annual Jackson Hole meeting. Credit outperformed government bonds, with high yield and emerging market debt outperforming investment grade debt.
- Commodities gained across the board. Brent crude oil held near \$90 a barrel and both precious and industrial metals rallied, with gold up 12% as the Treasury's move into the bond market added to its appeal. Agricultural prices advanced as El Niño and the war in Ukraine raised concerns over supply.

Positives:

- Bloomberg Commodity Index ETF (+5.8%) and iShares Physical Gold ETC (+12.0%) were standout performers.
- Within equities, the iShares S&P 500 Information Technology Sector ETF (+7.7%), Third Avenue Global Value Fund (+6.5%) and Nomura Japan Small Cap Fund (+4.7%) were the strongest performers.
- MSIM Emerging Market Debt Opportunities Fund (+1.5%) continued its strong performance, reaching 10% returns year-to-date.

Negatives:

- Latitude Global Fund's (-1.2%) more defensive positioning meant it lagged in a rising market, while PGIM Global Equity Opportunities Fund (-1.7%) and Polen U.S. Small Company Growth Fund (-1.5%) also detracted from portfolio performance.
- Alternatives were broadly flat, with BH Absolute Return Government Bond Fund (-0.5%), Trium Alternative Growth Fund (-0.5%) and Lazard Rathmore Alternative Fund (-0.1%) returning small negatives.

Global Market

What happened last month?

- Global equities rose 2.1% in August on resilient economic data and a strong second-quarter earnings season. Software led an IT sector rebound from July's sell-off, while Japan was the month's standout market, gaining close to 4% in local currency terms.
- Global bonds finished broadly unchanged (+0.1%), but that masked a volatile month for government bond yields (yields move inversely to prices). Rising energy prices remained a concern, the US Treasury announced larger buybacks of longer-dated bonds, and Fed Chair Kevin Warsh struck a hawkish tone at the Fed's annual Jackson Hole meeting. Credit outperformed government bonds, with high yield and emerging market debt outperforming investment grade debt.
- Commodities gained across the board. Brent crude oil held near \$90 a barrel and both precious and industrial metals rallied, with gold up 12% as the Treasury's move into the bond market added to its appeal. Agricultural prices advanced as El Niño and the war in Ukraine raised concerns over supply.

Positives:

- The portfolios' quality tilt added value, with Aberdeen World Equity Enhanced Index Fund (+2.3%) outperforming the broader global equity market.
- The small-cap tilt, with L&G Global Small Cap Equity Index Fund (+2.3%), added to performance as smaller companies outpaced large companies.

Negatives:

- Fixed income lagged equities and alternative asset classes.

Performance to 31 August 2026, in GBP, total return, source: Saltus + Ani.

Inception Date 31/10/21. *Measured over 3 years (monthly). **Underlying Fund Charges. **Short term ARC data are estimates and are likely to be revised.**

Saltus in-house funds pay quarterly distributions. Ex dividend dates: 28/02, 31/05, 31/08, 30/11. Dividend payment dates: 01/04, 01/07, 01/10, 01/01.

Past performance cannot be reliably used to predict future returns. Investments do not guarantee a return, the value and the income from them can fall as well as rise. You may not get back the amount originally invested.

Performance shown is of the Saltus model portfolios. Actual client performance may differ. Performance is shown net of an assumed 0.25% investment management fee, and all third-party fund charges. Other charges may apply depending on the assets under management and agreed service level which may reduce the figures quoted

Managed Plus

What happened last month?

- Global equities rose 2.1% in August on resilient economic data and a strong second-quarter earnings season. Software led an IT sector rebound from July's sell-off, while Japan was the month's standout market, gaining close to 4% in local currency terms.
- Global bonds finished broadly unchanged (+0.1%), but that masked a volatile month for government bond yields (yields move inversely to prices). Rising energy prices remained a concern, the US Treasury announced larger buybacks of longer-dated bonds, and Fed Chair Kevin Warsh struck a hawkish tone at the Fed's annual Jackson Hole meeting. Credit outperformed government bonds, with high yield and emerging market debt outperforming investment grade debt.
- Commodities gained across the board. Brent crude oil held near \$90 a barrel and both precious and industrial metals rallied, with gold up 12% as the Treasury's move into the bond market added to its appeal. Agricultural prices advanced as El Niño and the war in Ukraine raised concerns over supply.

Positives:

- Bloomberg Commodity Index ETF (+5.8%) and iShares Physical Gold ETC (+12.0%) were standout performers.
- Within equities, Third Avenue Global Value Fund (+6.5%), L&G Global Technology Index Trust (+5.0%) and Nomura Japan Small Cap Fund (+4.7%) were the strongest performers, with the L&G fund recovering alongside the wider IT sector.
- MSIM Emerging Market Debt Opportunities Fund (+1.5%) continued its strong performance, reaching 10% returns year-to-date.

Negatives:

- Latitude Global Fund 's (-1.2%) more defensive positioning meant it lagged in a rising market, while PGIM Global Equity Opportunities Fund (-1.7%) and Polen U.S. Small Company Growth Fund (-1.5%) also detracted from portfolio performance.
- Trium Alternative Growth Fund (-0.5%) gave back some ground in a strong month for risk assets.

Important information

What is the ARC PCI benchmark?

It is an independent benchmark that assesses us against all of our competitors. We have no input on the benchmark and how the data is presented. ([ARC Private Client Indices \(PCI\): Asset Risk Consultants](#))

Who is included in the benchmark?

Nearly every major wealth manager in the UK is included in the benchmark. For a list of all the firms included please [click here](#).

What is the 'Sharpe Ratio'?

This demonstrates the level of return generated per unit of risk taken. It is a useful identifier to determine if a manager is rewarded for the risk they are taking.

Past performance cannot be reliably used to predict future returns. Investments do not guarantee a return, the value and the income from them can fall as well as rise. You may not get back the amount originally invested.

Sharpe ratio is calculated using the following formula:

$$\text{Sharpe Ratio} = \frac{\text{Portfolio Returns} - \text{Risk Free Rate}}{\text{Portfolio Volatility}}$$

All components are calculated as annualised figures using 5-year monthly data. The risk-free rate used here is the Bank of England Base rate.
